

Run a PDMP Report

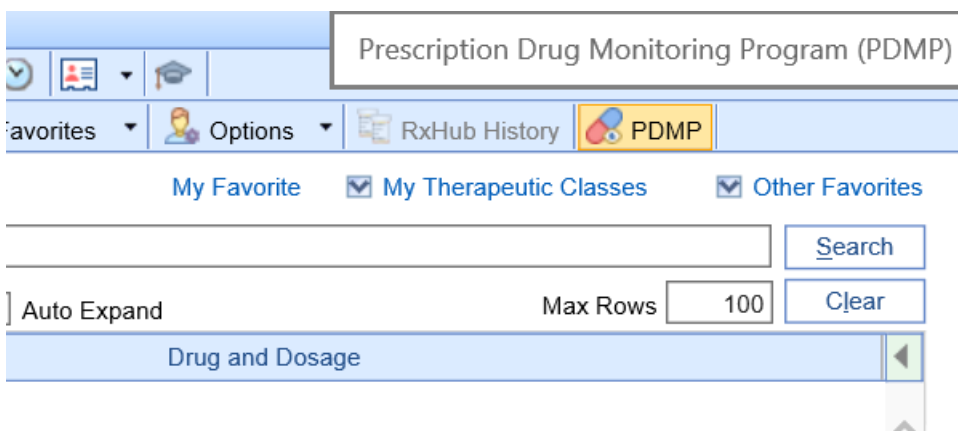

Last Modified on 09/09/2025 10:24 am EDT

iSalus Healthcare has integrated with APRISS Health to support PDMP reports in participating states. If you have not yet been approved by APRISS Health with an interface credential, complete the initial setup [here](#).

Provider Setup Note: In the Surescripts Provider screen found under Setup > Provider > More > Rx Prescribing (SPI setup screen) be certain that the 'Speciality Level' checkbox is set for the prescriber or the PDMP request will fail with the error message "There was a problem retrieving the window initialization". Updating the prescriber's record with the appropriate Speciality Level resolves that error.

To run this report for a patient, follow the steps below.

1. Access the Prescriptions Chart Tab for a patient.
2. Click on the **PDMP** button.

3. Select the Provider running the report and click the **Request PMP Results**.

4. The request will be run. Once complete, the report may be viewed via the **Patient Report** hyperlink.

----- PDMP Results -----
-

[Patient Report](#) (can only be clicked on once per request)
