

# Overview of the Summary tab for Mobile Charts

Last Modified on 01/21/2021 10:44 am EST

The Summary section of the OfficeEMR Mobile patient chart allows a user to easily access a large amount of data for a patient in one single place while on the go.

The summary window provides details related to a patient's allergy list, medication list, problem list, past encounters, and more. All of this information is retrieved from the OfficeEMR chart and many of these same sections can be changed/added to within the mobile application itself.
