

Patient Header Tooltip User Setting

Last Modified on 10/17/2024 11:18 am EDT

By default the OfficeEMR Patient Header in the EMR, iScheduler, and eDocuments has a tool-tip popup that displays when the user hovers over the text of the patient header. For added customer satisfaction the 24.120 Release provides practice users with the ability to turn off this header tool-tip.

Users would access their user setting and then search for the User Setting: Patient Header Tool-tip Display and then uncheck the Display checkbox to turn off the EMR, iScheduler, and eDocuments patient header tool-tip popup. *Note: It may be necessary for the user may to use the Reset Window tool to get the new setting to take place in one of the portal screens.*

The screenshot shows a web browser window titled "OfficeEMR Search - Google Chrome" with the URL "qatest.isalushealthcare.com/officemd/screens/helpsearch.htm?search=×tamp=1729174685675&u1=ginnie&u2=3F45916AAAE040C1A86...". The search results for "Patient Header Tooltip" (110 results) are displayed. A green box highlights the search result "User Setting: Patient Header Tooltip Display". A modal window titled "User Setting" is open, showing a checkbox labeled "Display" which is currently unchecked. The modal text reads: "If this setting is set then the patient header tooltip will be displayed when hovering over the patient header." The modal has "OK" and "Close" buttons at the bottom right. The background search results list several other user settings, including "User Setting: Auto...", "User Setting: Billing...", "User Setting: Con...", "User Setting: Control: Spell Checking Advanced", "User Setting: Copy Forward Previous Dialysis Visit Template Data", and "User Setting: Copy Patient ID Card Scan to Patient Photograph". At the bottom of the search results, there is a pagination bar with "Previous" and "Next" links and a sequence of numbers from 1 to 10.
