User Problem List Favorites

## COMING SOON (Release: November 1, 2024)

Introducing the new Favorites Feature in the Problem List!

Users will now notice a star icon next to each problem, allowing them to mark items as personal favorites. This star makes it easy to track and quickly access frequently used problems.
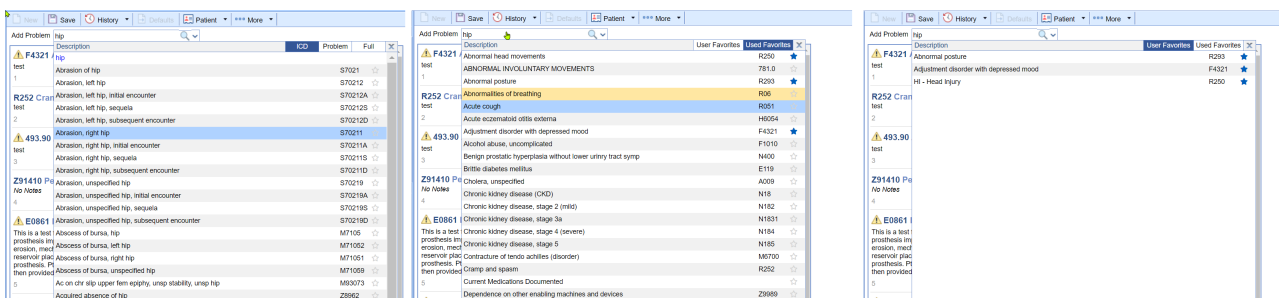

From the search bar or by using the drop-down menu in the search bar, users can access their saved lists and select or deselect the star icon to manage favorites. Items with a grayed-out star can be marked as User Favorites* by clicking the icon, turning it BLUE. These items will then appear in the User Favorites tab.

If a user is in the User Favorites tab and clicks the star icon next to an item, the item will be deselected, the star will turn to a gray outline only, and it will no longer appear in the User Favorites tab.
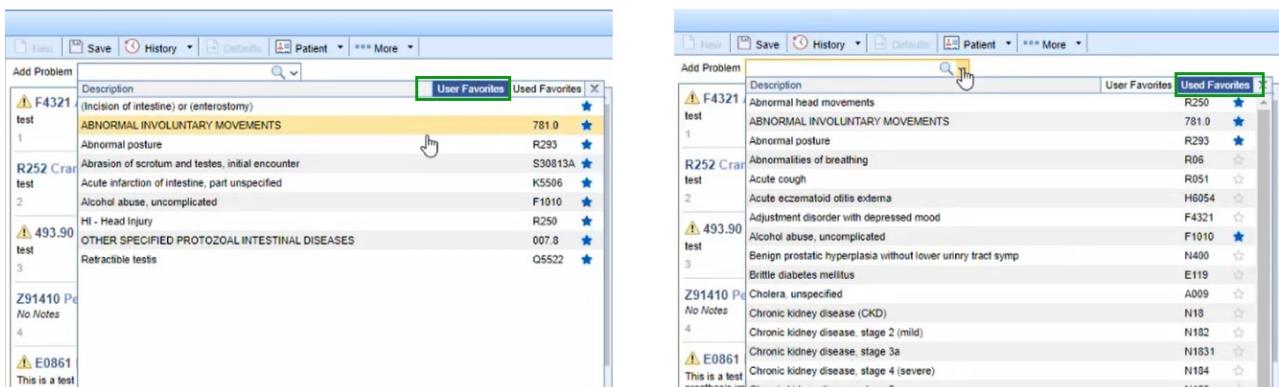

By default, the Used Favorites tab is displayed, but **users can set the User Favorites tab as their default view through a new user settings option** (*User Setting:* **Default favorite list to User Favorites**). This makes managing and accessing personalized lists even easier!

User Settings

Ferrer, Ginnie (!gferrer)

Setting: default favorit

☐ Apply to all users
