

Overview of RecordSync

Last Modified on 06/17/2025 2:40 pm EDT

RecordSync is a bi-directional document exchange feature that leverages the [Surescripts Record Locator & Exchange](#) network to access documents from connected health systems through a national health data exchange framework called Carequality. This feature removes barriers for specialists looking for medical records related to visits outside their organization, allowing them to review their patient's clinical history, including previous encounters, lab results, diagnoses, allergies, immunizations, medications, and other treatments, by querying trusted data sources across different healthcare systems and pulling the relevant records into OfficeEMR.

Simultaneously, it allows outside providers working with your patients to retrieve pertinent data related to visits within your clinic (as long as they are also using Carequality) by using the HL7® FHIR® standard transactions employed by RecordSync. This integration also allows practices to attest to the Merit-based Incentive Payment System (MIPS) Promoting Interoperability (PI) performance category for the Health Information Exchange (HIE) requirement by taking part in the RecordSync bi-directional exchange.

Key Features

- Retrieve outside records from members of CareQuality & Surescripts Record Locator & Exchange national HIE network
- Import & Reconcile CCDs reducing the burden of Allergies, Medications, and Problem management
- Save PDFs, and other documents to the patients eDocuments and assign them for review
- Share CCDs with other participants automatically (patient must be consented) & view the records shared in the Sharing History
