

# RecordSync | Document Exchange

Last Modified on 04/16/2025 12:20 pm EDT

## Overview of RecordSync

This feature is currently in **BETA**. It is expected to be released to all customers in early May; giving practices enough time to establish workflows before the 180-day reporting period for H2 of 2025.

RecordSync is a bi-directional document exchange feature that leverages the [Surescripts Record Locator & Exchange](#) network to access documents from connected health systems through a national health data exchange framework called Carequality. This feature removes barriers for specialists looking for medical records related to visits outside their organization, allowing them to review their patient's clinical history, including previous encounters, lab results, diagnoses, allergies, immunizations, medications, and other treatments, by querying trusted data sources across different healthcare systems and pulling the relevant records into OfficeEMR.

Simultaneously, it allows outside providers working with your patients to retrieve pertinent data related to visits within your clinic (as long as they are also using Carequality) by using the HL7® FHIR® standard transactions employed by RecordSync. This integration also allows practices to attest to the Merit-based Incentive Payment System (MIPS) Promoting Interoperability (PI) performance category for the Health Information Exchange (HIE) requirement by taking part in the RecordSync bi-directional exchange.

## Key Features

- Retrieve outside records from members of CareQuality & Surescripts Record Locator & Exchange national HIE network
- Import & Reconcile CCDs reducing the burden of Allergies, Medications, and Problem management
- Save PDFs, and other documents to the patients eDocuments and assign them for review
- Share CCDs with other participants automatically (patient must be consented) & view the records shared in the Sharing History

# Getting Started

### Record Locator Setup checklist:

- **Required: Set up Role 'Surescripts Record Locator'** - This role allows users to see/use the Surescripts Record Locator chart tab.
- **Optional: RLE Consent Template Letter** - *Set up the RLE consent checkbox associated with signing the letter for intakes that have a letter setup.*
- **Required: Chart Tabs Favorites Setup** - *Surescripts Record Locator must be added to your Setup Favorites for it to be displayed within your Chart Tabs.*

## Surescripts Record Locator Role Setup Details

You must turn on the Surescripts Record Locator role to use RecorSync:

**Required Role:** *Surescripts Record Locator* - this general role provides users access to see/use the Surescripts Record Locator chart tab.

1. Click on the **Setup** portal.

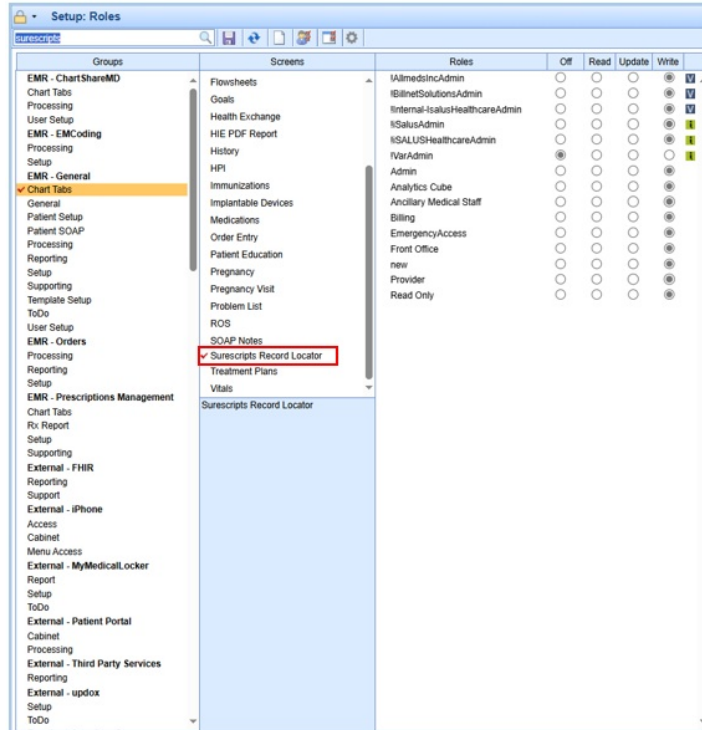

2. Select **Roles** under Administrative Setup.

3. Type Intake Assignment into the search box and hit the **Magnifying Glass** button.

4. The **Surescripts Record Locator** role should return and be selected. Assign **Write** access to the appropriate roles (best practice is to assign Write access to all roles).

5. Press the **Save** button to save your changes

## Intelligent Intake Consent & Letter Setup

**Optional RLE Consent Letter Template:** You may select the letter template for **RLE Consent** for the consent signature field or set up the RLE consent checkbox associated with signing the letter for intakes that have a letter setup (the patient signature quick pick should be on the letter).

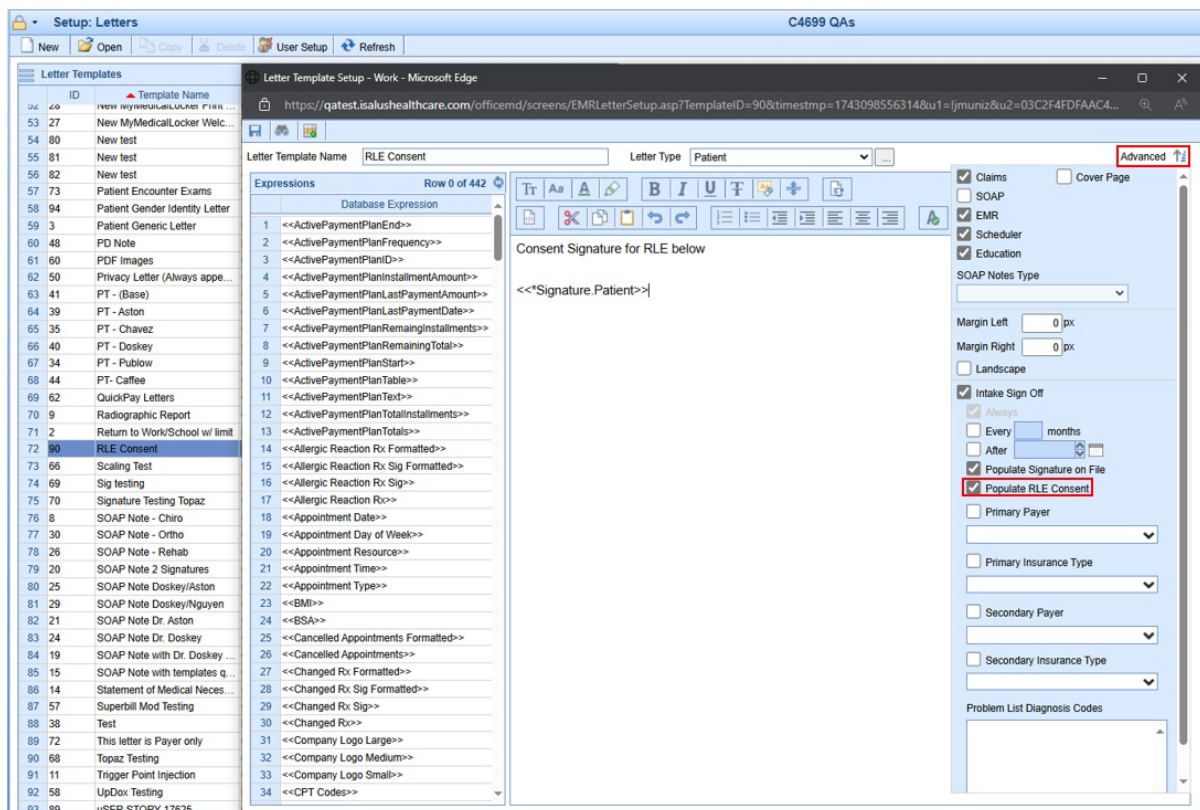

1. Click on the **Setup** portal.

2. Select **Letters** under EMR Setup.

3. Select the **RLE Consent** Letter Template, click Advanced, and check the "**Populate RLE Consent**" box.

## Chart Tab Favorites Setup

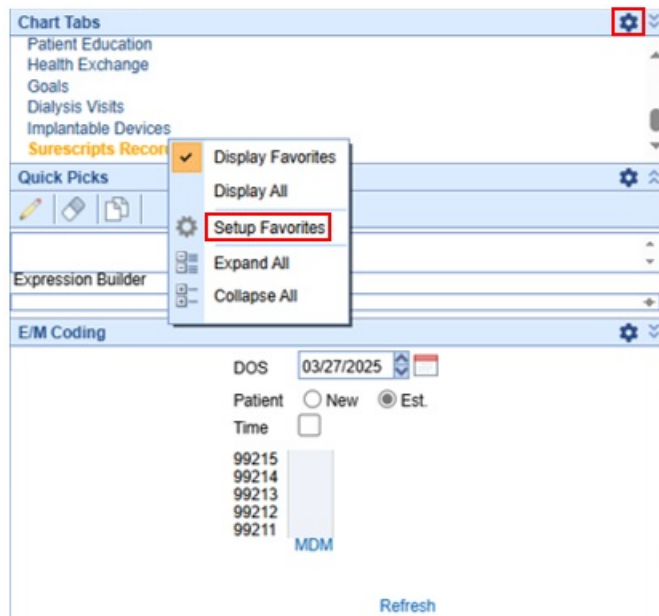

Once you've added the Surescripts Record Locator role, you must include it in your Chart Tabs Setup Favorites to display it within your chart tabs.

**Note:** Until you add the Surescripts Record Locator to your Setup Favorites, it will not be visible within your Chart Tabs.

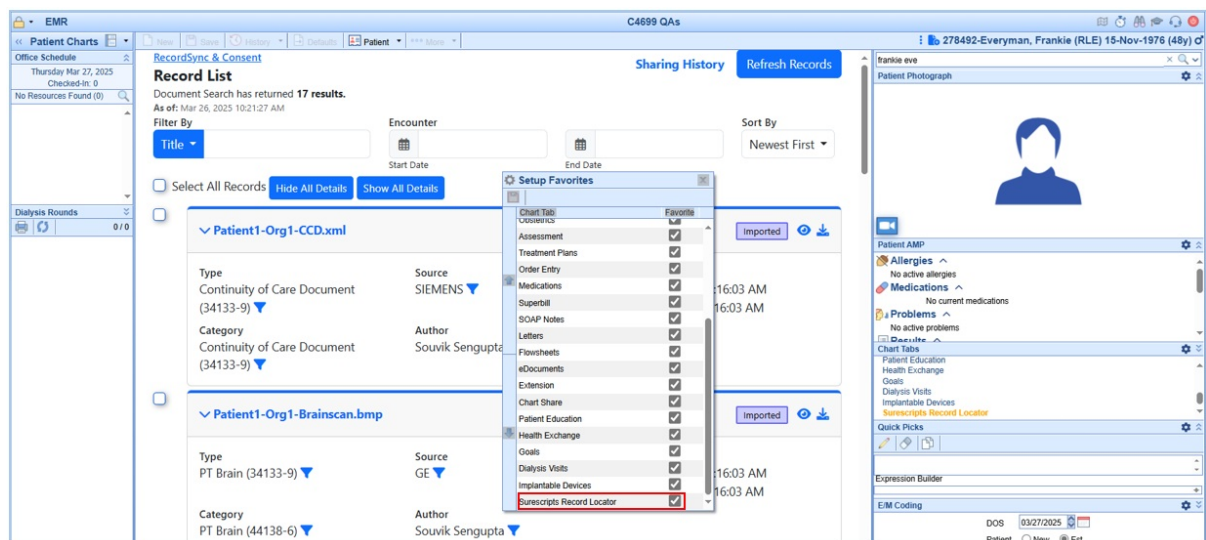

1. Click on the **EMR** portal.

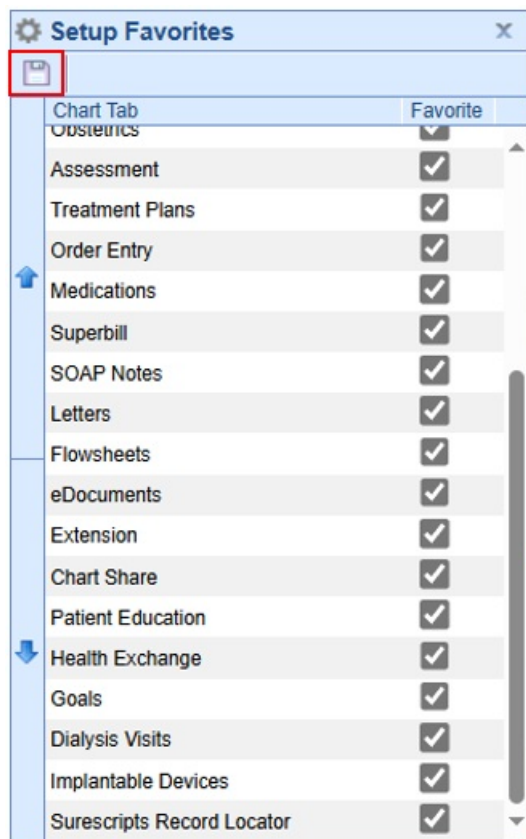

2. Select your patient and access the Chart Tabs Setup Favorites option.

3. Add the Ssurescripts Record Locator to the setup favorites by checking the corresponding box.

4. Click Save.

## Retrieving documents using RecordSync

1. Once in a patient's chart, select the **Surescripts Record Locator** chart tab.

2. Based on your office SOP, you must ensure the RecordSync & Consent for Surescripts has been provided (opted in) by the patient and the **Record Locator & Exchange Consent** toggle switched to the **ON** position.

**Tip:** You can also provide Record Locator Consent from the **Patient Setup > Miscellaneous** screen.

3. Search for documents by filtering by Title, Type, Category, Source, or Author. You can also filter by Encounter Start and End Date. You can also sort by Newest First, Oldest First, Type, Category, Source, Author, and Title. Once records are retrieved, they are kept for a period of 30 days. A new search is automatically initiated after 30 days or when the user manually refreshes the records (by selecting the "Refresh Records" option).

The screenshot shows the EMR Record List interface. At the top, there's a header with 'EMR' and 'C4699 QAs'. Below this, a 'Patient Charts' sidebar is visible. The main area is titled 'Record List' and shows 'Document Search has returned 91 results. As of: Mar 25, 2025 6:06:27 AM'. There are filters for 'Filter By' (Title, Type, Category, Source, Author), 'Encounter' (Start Date, End Date), and 'Sort By' (Newest First, Oldest First, Type, Category, Source, Author, Title). A dropdown menu for 'Filter By' is open, showing 'Title' selected. Below the filters, there's a table of results. The first row is expanded, showing details for 'PatientCCDA.xml'. The status is 'Available'. The type is 'Continuity of Care Document (34133-'. The source is 'CW Staging Test Account'. The encounter is '9)'. The author is 'CW Staging Test Account'.

A list of documents based on your search filters will be available. These documents will be in one of the following statuses:

Status	Description
Available	The document is available but hasn't been retrieved from the external organization.
Retrieving	Actively retrieving the document from the external organization.
Retrieved	The document has been retrieved and is available for viewing or import.
Imported	The document is waiting in the reconciliation queue (If not a CCD, it is imported as an eDocument).
Error	The document cannot be retrieved (incomplete encounter/record) or source system is unable to respond.

- Most files will be CCDA files. Please note that if the file is not a CCDA file, the "Save As eDocument" screen will prompt you to select how and where to save the file (same workflow as with other eDocuments).

Please be aware that after importing the documents, there is no automatic reconciliation process. The documents are added to the reconciliation queue in the Summary chart tab, but they still need to be manually merged/reconciled via the normal reconciliation process.

# Merging CCDs with RecordSync & the Reconciliation screen

Please note that if a document is not a CCD, it will be imported as an eDocument. For more information on importing non-CCD documents into eDocuments, please refer to our [Indexing and Tasking eDocuments](#) article.

Follow these steps to Merge/Reconcile CCDs:

1. Once the CCD documents have been imported, open the patient's chart in the EMR (ensure you are on the Timeline Summary screen).

The screenshot displays the EMR interface for a patient named Frankie (RLE) 15-Nov-1976 (48y). The main area shows three tabs: Allergies, Medications, and Problems, each with a message indicating no active items. Below these is a 'Decision Support Intervention Messages' section with a message about high blood pressure screening. The 'Timeline' section shows a grid of dates from 2/12/25 to 3/26/25, with various medical events marked. The right sidebar contains patient information, a photograph, and a list of chart tabs including Allergies, Medications, Problems, and eDocuments.

2. Click the **Patient Reconciliation** (clipboard icon).

The screenshot shows the Patient Reconciliation screen. It features a sidebar with 'Telehealth' and 'Authorizations' buttons. The main area has a 'Patient Reconciliation' header and a table with columns for 'Section', 'Date', and 'Action'. The 'Action' column contains a clipboard icon, which is highlighted with a red box.

3. From this screen, you can work your reconciliation process in the same manner as you would with Allergens, Medications, Problems, and other categories. You can then set the corresponding statuses in the Action column.

**Medications**

**Patient Reconciliation for Chart # 24814, Hula, Test 09/19/2016(8.6y) Male**

Allergies, Medications, Problems and Immunizations will be updated as indicated by the Action column.

# MIPS Reporting & RecordSync

Eligible clinicians can attest to the Health Information Exchange (HIE) requirement of the MIPS Promoting Interoperability (PI) performance category by participating in the RecordSync bi-directional exchange.

PROMOTING INTEROPERABILITY			
ONC 2015 Edition Cures Update EHR: for 2025 reporting year.			
Measure	Performance Rate		Score
Safety Assurance Factors for EHR Resilience (SAFER) Assessment*	Attest: No	0%	
Security Risk Analysis*	Attest: No	0%	
e-Prescribing*	0 / 0	0%	0 / 10
Query of the PDMP*	Attest: No	0%	0 / 10
Provide Patients Electronic Access to their Health information*	0 / 0	0%	0 / 25
HIE Bi-Directional Exchange*	Attest: No	0%	0 / 30
Public Health and Clinical Data Exchange*	0 / 2	0%	0 / 25
Total Score:			0 / 100
Promoting Interoperability Score:			0 / 25
* Indicates Required Measure to earn any points in the Promoting Interoperability Category			

## Scoring

Required to Attest YES for Promoting Interoperability Performance Category Score if submitting as an alternative to the Support Electronic Referral Loops by Sending Health Information and the Support Electronic Referral Loops by Receiving and Reconciling measures or an alternative to the Enabling Exchange Under TEFCA measure. This will give the provider 30 points to his/her score.

## Exclusion

N/A

## Measurement

The MIPS-eligible clinician or group must attest that they engage in bidirectional exchange with an HIE to support transitions of care.

## Implementation

The MIPS-eligible clinician must attest YES to the following:

- I participate in an HIE in order to enable secure, bi-directional exchange to occur for every patient encounter, transition or referral, and record stored or maintained in the EHR during the performance period in accordance with applicable law and policy.
- The HIE that I participate in is capable of exchanging information across a broad network of unaffiliated exchange partners including those using disparate EHRs, and does not engage in exclusionary behavior when determining exchange partners.
- I use the functions of CEHRT to support bi-directional exchange with an HIE.

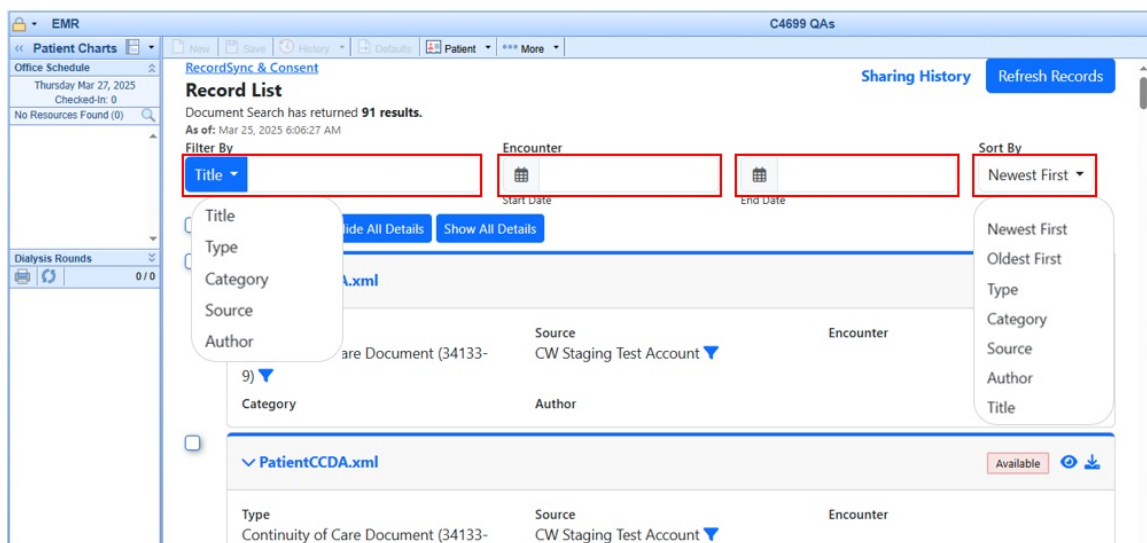

## Indexing & Tasking eDocuments

Most files available within the Surescripts Record Locator will be CCDAs files. Please note that if a file is not a CCDAs file, the "Save As eDocument" screen will prompt you to select how and where to save the file (same workflow as with other eDocuments)

1. Once in a patient's chart, select the **Surescripts Record Locator** chart tab.

2. Search for documents by filtering by Title, Type, Category, Source, or Author. You can also filter by Encounter Start and End Date. You can also sort by Newest First, Oldest First, Type, Category, Source, Author, and Title. Once records are retrieved, they are kept for a period of 30 days. A new search is automatically initiated after 30 days or when the user manually refreshes the records (by selecting the "Refresh Records" option).

3. To import the file, select the **Import icon** on the top right of the document tab.

PatientCCDA.xml		
Type	Source	Encounter
Continuity of Care Document (34133-9) ▼	CW Staging Test Account ▼	
Category	Author	

4. If the file is not a CCDA file, hovering over the import icon will read "Import as EDocument."

5. Select the folder to save the file, the filename, the received date, and the user/group that should review the eDocument. Enter your review message and priority, then click **Save**.
