

iSalusExternal.GetPatientFilterDataImage

Last Modified on 04/14/2025 3:31 pm EDT

Overview

The iSalusExternal.GetPatientFilterDataImage webservice is used to obtain **eDocuments** (*documents/images*). This can be found here: EMR > Select Patient > eDocuments. The webservice will accept a patient ID and a start date for the input. All listed items will be returned.

Sample Call

Request

```
<request>
  <security>
    <key>REDACTED</key>
    <version>1.0</version>
    <userid />
    <account>REDACTED</account>
  </security>
  <patient_id>25007</patient_id>
  <document_list>
    <image_menu_xref_id>3180</image_menu_xref_id>
    <image_menu_xref_id>3337</image_menu_xref_id>
  </document_list>
</request>
```

Response

Request

The Request element will serve as a wrapper for the entire body of the XML request.

Request > Security

See documentation for the Security node here: [Access to Webservices](#)

Request > Patient_ID

Chart number for the patient data you would like to retrieve. The following document IDs must be affiliated with that provided patient in order to return content.

Request > document_list

This will serve as a wrapper for all image_menu_xref_id(s) being requested.

Request > document_list > image_menu_xref_id

This element is used to define the document(s) being requested. The request supports multiple elements. The identifier is received within the **GetPatientFilterData** response as well as the patient_id.

Response

The Response element will server as a wrapper for the entire body of the XML response.

Response > document_list

This element will serve as a wrapper for all eDocuments returned in the response.

Response > document_list > list_item

This element will serve as a wrapper for each eDocument returned in the response.

Response > document_list > list_item > image_menu_xref_id

This element is crucial for vendors intending to return the document contents. This ID represents an individual eDocument in the patient chart and is used within **GetPatientFilterDataImage** to return the image.

Response > document_list > list_item > menu_id

Serves as the identifier for the folder the eDocument is saved within.

Response > document_list > list_item > menu_path

A dot-notation representation of the location of the document within the eDocuments folder structure.

Response > document_list > list_item > image_name

Represents the filename of the eDocument.

[Response > document_list > list_item > creation_date](#)

Represents the date the image has been added to the patient chart.

[Response > document_list > list_item > base64_image](#)

Contains the base64 representation of the affiliated eDocument.
