

EVERHEALTH IN THE MARKET – AND WHAT UPLIFT ADDS TO THE PROMISE

Simplifying and empowering the lives of healthcare professionals.

EverHealth's commitment to independent practices – and the iSalus Uplift turns it into measurable infrastructure.

EverHealth is the practice partner for independent specialty groups – physicians, the teams that run their practices, and the patients those practices serve. The iSalus Uplift sharpens that promise into infrastructure: a modernized OfficeEMR clinical core practitioners use every day, paired with a governed API layer that lets EverHealth and a vetted set of partners extend the practice – without adding compliance work, vendor management, or workflow disruption.

Three EverHealth commitments make the contribution measurable. More practices on RCM at a stronger net collection rate. Documentation time cut from fifteen minutes to three. The administrative coordination overhead that drains today's practices reduced by half.

The practice platform at a glance: a modernized clinical surface on top, a governed interoperability layer in the middle, EverHealth products and vetted partners plugged in below.

MANAGE YOUR OFFICE

A modernized clinical core

Charting, scheduling, and billing on a component-based UI consuming clean APIs – not stored procedures. Practitioners spend less time in the chart and more time with patients. Office Managers see fewer support tickets and faster claim turnarounds.

GROW YOUR PRACTICE

A governed API layer the EHR vendor stands behind

EverHealth products and a curated partner set plug in through a governed API layer – tier classification, scope governance, and BAA-gated integration keep clinical and financial risk contained. The practice gets the ecosystem upside without having to police it.

INCREASE YOUR REVENUE

Every modernization compounds the next

CollaborateMD's RCM – an RCM solution capable of taking on the activities of a Centralized Billing Office (CBO) – alongside EverHealth Scribe's AI documentation and the Document Rules Engine, all riding the same governed surface. Faster reimbursement, more billable encounters captured, fewer keystrokes between care delivered and revenue recognized.

Simplified Healthcare Starts with EverHealth.
