

Company Setting: Auto-execute PDMP report when Medications tab is activated

Last Modified on 10/07/2026 3:31 pm EDT

The "**Auto-execute PDMP report when Medications tab is activated**" company setting allows a practice to automatically pull the patient's Prescription Drug Monitoring Program (PDMP) report when the Medications tab is opened, so users no longer need to click the PDMP button to do so.

Default Value: Off (not checked)

Options:

- **Off (not checked)** - The practice must manually pull the patient's Prescription Drug Monitoring Program (PDMP) report.
- **On (checked)** - It will automatically pull the patient's Prescription Drug Monitoring Program (PDMP) report when the Medications tab is opened.

This setting only takes effect if the **PDMP Beta Option** is enabled for your practice. You can turn the setting on at any time, but it won't do anything until the Beta Option is active.
