

User Setting: Display PDMP Summary Dialog

Last Modified on 10/07/2026 4:09 pm EDT

When this setting is checked, opening the Medications tab in the EHR pulls the patient's PDMP report in the background and opens a small window on the right showing the patient's scores. This puts the key PDMP information in front of the provider as soon as they open the Medications tab so they don't have to open the full report to see it.

This setting works together with the company setting that runs the PDMP report automatically and only takes effect when both of these are true:

- Your practice is a **PDMP Beta** user.
- The company setting "**Auto-execute PDMP report when Medications tab is activated**" is enabled.

The screenshot shows a 'User Settings' window with a title bar and a close button. Below the title bar is a toolbar with icons for a folder, a gear, and a magnifying glass. The main content area is divided into two sections: 'Setting' and 'Tool Tip'. The 'Setting' section has a search bar containing 'Display PDMP Summary Dialog' and a checkbox labeled 'Display PDMP summary dialog' which is checked. To the right of the search bar is an 'Apply to all users' checkbox which is unchecked. The 'Tool Tip' section contains a text box with the following text: 'If checked, the PDMP report summary will display once the Medication tab is activated in the EHR. This only functions if the PDMP Auto-Execute Company Setting is enabled.'

Default Value: Off

Options:

- On (checked) and Off (unchecked)
- *Apply to all users* checkbox (enables it for "all users").
